LAB MANUAL

Getting Started with SAP Analytics Cloud

2.1 Practical- Getting Started with SAP Analytics Cloud

Objective:

The objective of this lab is to utilize ChatGPT to generate Python code that creates an animation of an elastic ball dropping from a height and bouncing when it touches the ground using the Pygame library. Additionally, this lab aims to demonstrate how to execute the generated code to visualize the animation.

The primary objective of this practical session is to **introduce students to the foundational features and functionalities of SAP Analytics Cloud (SAC)** and help them gain **hands-on experience** with data visualization, data modeling, and story creation within SAC.

Equipment Required:

1. Laptop/Desktop Computer with Processor: Intel i3 or above, RAM: 4 GB (8 GB recommended), Internet connectivity, Screen resolution: 1366x768 or higher
2. Stable High-Speed Internet Connection Required for accessing the SAP Analytics Cloud platform (as it's cloud-based). Minimum speed: 4 Mbps (per device)

Prerequisites:

1. Fundamentals of Data Analytics and Spread sheet skills
2. Basic Internet and Cloud Concepts
3. SAC components: Stories, Models, Datasets, Types of charts and dashboards, The purpose of using SAC in business intelligence

Problem Statement:

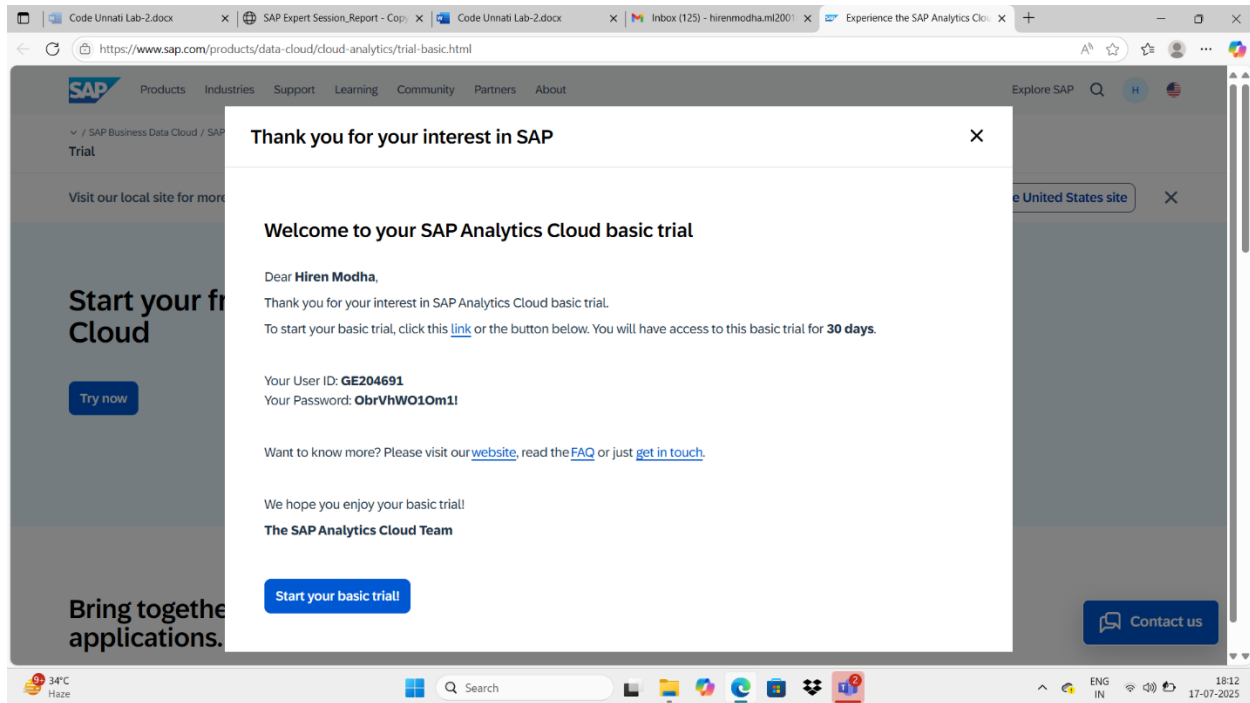

Introduction to SAP Analytics Cloud

Procedure:

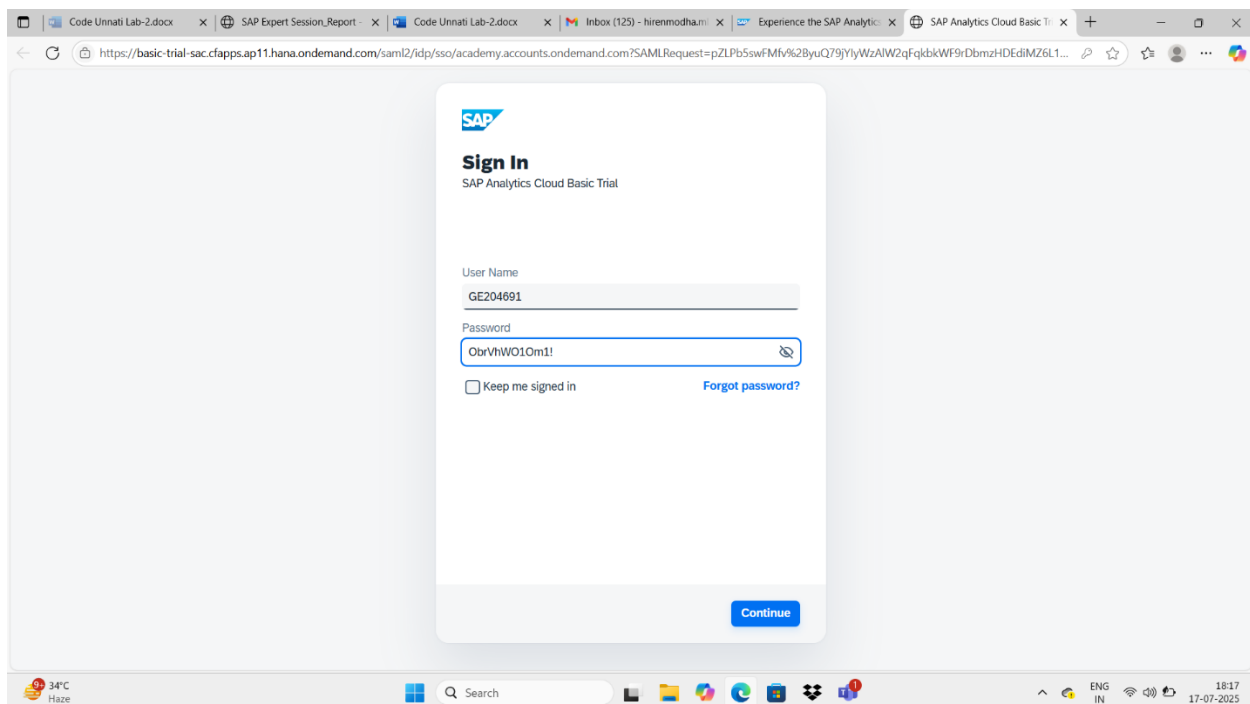

Following Steps are used to creating an account on **SAC Account**.

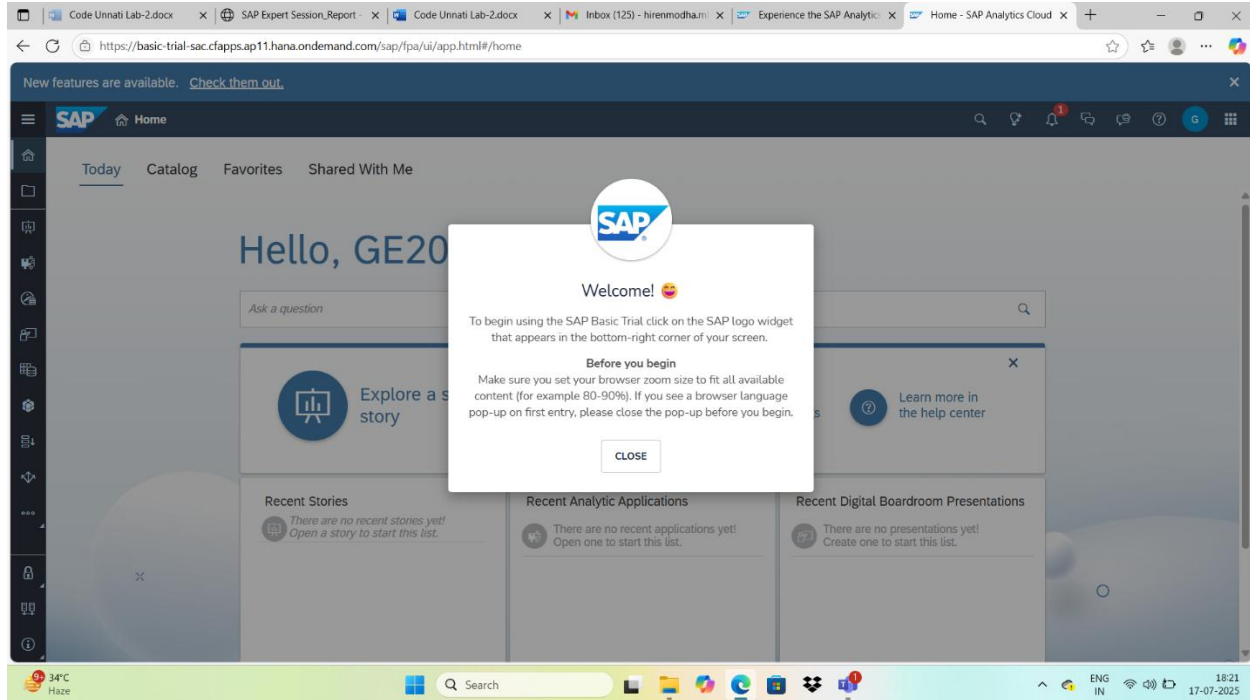

Step 1: Creating an account on SAC

1. Click on the link - <https://www.sap.com/products/data-cloud/cloud-analytics/trial-basic.html>
2. Click on **Start your free trail** option.

Step 2: Click on 'Start your basic trial' and Enter the credentials and clicked on **Continue** button then it will redirect on SAP Analytic Cloud home page.

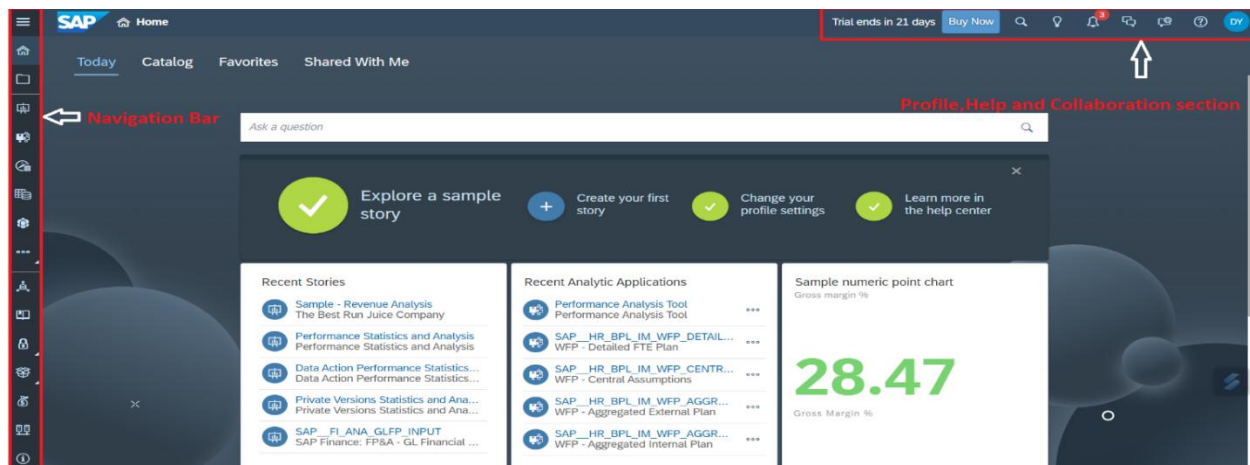

Step 3: Click on 'CLOSE' button.

Great! You have successfully created a free trail account on SAP Analytic Cloud basic trial. Now let's start with exploring more about user interface.

Step 4: User Interface

1. Home screen mainly contains Navigation Bar which Includes different icon of Files, Story, Modular and so on.
2. It also contains the options like Profile, Help and Collaboration section which is located at top right corner as shown in fig below.

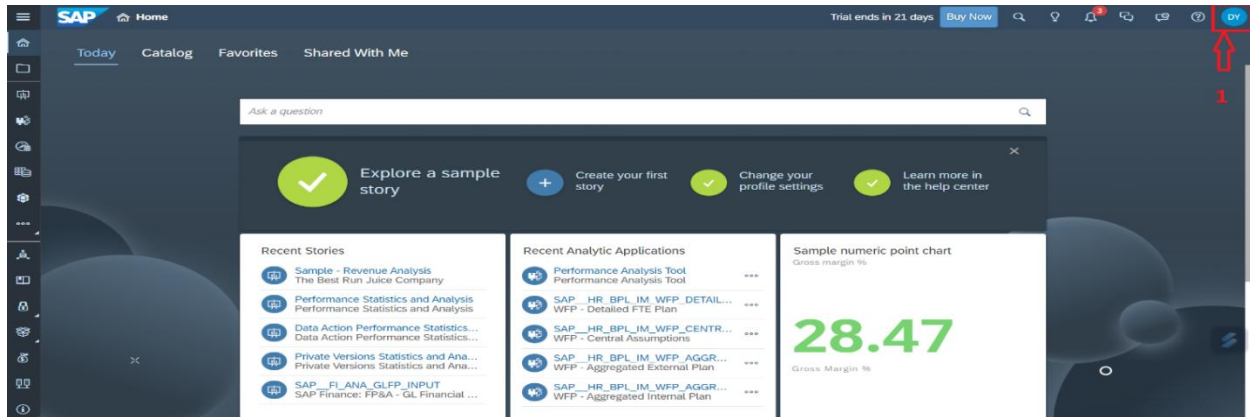

Now you can customize the home screen your requirement, Let's begin with lab no. 2.

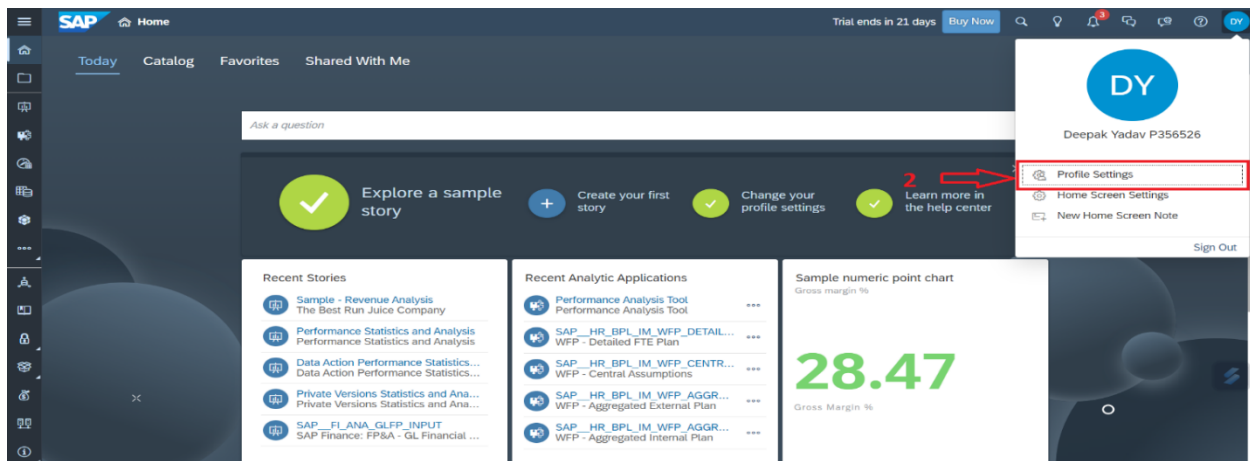

2.2 Practical- Customizing your screen

Step 1: Select profile

1. To edit user profile, click on profile icon (Top Right Corner)

2. click on Profile Settings option.

2.4 Results:

Now you get an idea of how to create account an SAP Analytics account and manage your profile, create folder.
